

Sujin K

Full-Stack Engineer · Python, TypeScript/React, end-to-end features across front and back ends

lksujins@gmail.com · sujin.tech · github.com/sujink1999 · linkedin.com/in/sujink · Remote (global)

The easier way to review this: [sujin.tech/elevenlabs](#), a page mapping ElevenLabs' JD to the work below, with live demos.

6+ years shipping end-to-end features across front and back ends with high ownership: built a YC startup's app solo to 10M+ downloads, then co-founded Vanta, a health platform where I built everything from the TypeScript/React frontend to the Express APIs, data model, and a production tool-calling LLM agent behind an eval harness. Python in production too: a FastAPI ML microservice with word2vec embeddings and scikit-learn classifiers.

EXPERIENCE · 6+ years

Co-founder · Vanta

Sep 2025 – Present

TypeScript · React 19 / Next.js · Express 5 · React Native (Expo) · PostgreSQL / Drizzle · LLM pipelines

- Co-founded Vanta, a health/performance platform, and built the product end to end: data model, Express APIs, dashboards, and the App Store release.
- Scoped and built the core product as a proof of concept, then hardened it: an AI health coach, an agentic tool-calling chat agent with 18+ tools, durable memory with contradiction-resolving fact supersession, and propose-and-confirm governance for plan changes.
- Test design in practice: shipped the agent behind an eval harness of ~30 end-to-end scenarios with real tool dispatch and DB assertions, plus anti-hallucination regression tests.
- Built third-party integrations across the platform: Garmin and WHOOP wearable APIs merged by a reconciliation engine into one trustworthy record, Shopify embedded app, headless e-commerce store.
- Managed the datasets behind the product: biomarker and lab pipelines with PDF lab-report and DEXA parsing and rendering, and a daily-plan pipeline that adjusts to recovery signals.

Senior Founding Engineer · Beans

Jul 2025 – Sep 2025

Next.js · Node.js · Bull / Redis · AWS Lambda · Rust / Anchor

- Built a Solana launchpad and trading platform whose infrastructure held under real money: worker queues executing launches, trades, and withdrawals unattended at \$100k of trades an hour, with idempotent jobs, distributed locks, and automatic on-chain refunds on failure.
- Wrote the on-chain Anchor (Rust) program with simulation tests, and a cloud event pipeline decoding on-chain events in AWS Lambda through SQS into MySQL.

Founding Engineer · Caddi

Jul 2024 – Jun 2025

Browser extensions · AWS Lambda · Next.js

- Built a Chrome extension for swapping and bridging from any website, with a route checker comparing quotes across 19+ liquidity sources and flagging better routes.
- Ran it on serverless AWS Lambda microservices on cloud infrastructure; early builder on Farcaster Frames.

Senior Web3 Engineer · OviX / Gogo Protocol

May 2022 – Jun 2024

React · TypeScript · Cypress · i18n · multi-chain

- Built and led frontend development of the GOGOCOIN and OviX protocols, including UI/UX; primary author of the margin-trading and lending dApps, where security awareness is the job: a misrendered number is someone's money.
- Helped grow protocol TVL from \$500K to \$10M by introducing pre-mining rewards; shipped fully internationalized, Cypress-tested frontends.

Software Engineer · Mudrex (YC W19)

Sep 2021 – May 2022

Built the Mudrex mobile app from scratch in React Native, now 10M+ downloads; pre-seed through Series A.

Founding Engineer · Swix DAO

Mar 2022 – Jun 2022

Built the MVP of a crypto-native Airbnb using React, Node.js, and Web3.js.

Software Engineer 1 · Futuryze Digital Venture Studio

Feb 2021 – Oct 2021

Backend (Node.js) and UI (React) for the Fireside app; shipped iOS/Android apps with Flutter.

SELECTED PROJECTS

FincorpX (2024): document-AI expense backend with a Python ML microservice: FastAPI serving word2vec (gensim) embeddings into chained scikit-learn classifiers in production; receipt OCR (Azure Form Recognizer, Verify), QuickBooks OAuth2 sync, live WhatsApp finance bot.

SKILLS

Python: FastAPI · scikit-learn · word2vec / gensim · ML classifiers in production

Web development: TypeScript · React / Next.js · Redux · Tailwind · Framer Motion · browser extensions

Backend & APIs: Node.js / Express · PostgreSQL / MySQL · Drizzle · Redis / Bull · GraphQL · software design patterns · data structures

Cloud infrastructure: AWS Lambda · SQS · Vercel · scalability, performance, and security under real-money load

AI: LLM pipelines · agentic tool-calling · durable memory · eval harnesses · Claude / OpenAI APIs

Testing: test design · Cypress e2e · Jest · LLM eval harnesses · anti-hallucination regression tests

EDUCATION

B.E. Computer Science, SSN College of Engineering, Chennai (2017 – 2021)
